PUMP STATIONS

The Roman Empire famously tapped the force of gravity to move water from hillsides to city centers across aqueducts. Today we can leverage pump stations to do most of the heavy lifting and move water to wherever we want it to be.

۲

Pump stations move stormwater, wastewater, and other media for America's infrastructure needs. Engineers and contractors rely on these products to integrate with projects large and small.

Here's what to look for when you want a pump station system without the complexities of matching disparate products from multiple vendors.

- Does the company have strong expertise and experience in designing and manufacturing pump stations? Are their designs proprietary or are they simply following another company's specifications? Choose a manufacturer that owns the process from beginning to end.
- Do you need a very small system or one that can handle 15,000 gallons of flow per minute? Are you working with too many vendors to estimate your budgets accurately? Go with a vendor that provides it all in any size within your budget and deadline.
- How much support do you need for your projects? How much time and how many resources are your projects costing? Consistent products prepackaged as full solutions or customized to your job with expert support can cut your job costs.

 (\bullet)

• Is the work guaranteed? Will you need to fix issues down the road? Avoid costly problems by working with a vendor that guarantees its products.

Jensen Precast designs, engineers, manufactures, and delivers pump station components that work congruently with municipal, residential, commercial, and industrial systems. We have the experience and expertise to meet your project needs. Our pump station products are guaranteed with a full warranty.

۲

- Advance your project faster with our complimentary custom design packages and system integration services.
- Access our engineering expertise from design to startup for your project requirements.
- Get detailed pump selection analyses, system curve calculations,
 3D pump station layouts, and product specifications.

- Meet any specification with our team of engineers and project managers.
- Employ value engineer estimates to reign in expensive guesswork for the pump station portion of your projects.
- Leverage our comprehensive pump station bid documents to enhance contractor engagement with site specific operating and lifecycle cost comparisons.
- Secure a smooth approval process with a full submittal package complete with pumps, controls, valves, piping, precast concrete components and more.

- Boost your project success rate with our many years experience installing pump stations designed, engineered, and built to precision.
- Condense your job time with our preapproved authorizations for local agency requirements.
- Enhance your installation with our startup assistance, optional onsite supervision, and expert hands-on operations training.
- Obtain system review and support from project managers and engineering experts throughout entire process.
- Guarantee your pump station purchases with our full system warranty for lasting peace of mind.

3

APPLICATIONS

• High flow stormwater conveyance systems

۲

- Rainwater harvesting systems
- Landscape, agricultural, and golf course pumping systems
- Supply of water to canals and drainage of low lying lands
- Headworks applications with augers and screening systems
- Wet pit and dry pit applications
- Large wastewater systems for big box stores, technology campuses, financial business parks, and other enterprises
- Small wastewater systems for offices, schools, hospitals, apartments, condominiums, jails, and other residential environments

SOLUTIONS

()

- High quality precast concrete provides lasting solution over other materials
- Watertight joints reduce exfiltration, and infiltration issues
- Elevation, curve, structure, and control design options provide solutions for space and location demands
- Contemporary designs reduce turbulence and protect against odor for dense population settings
- Remote monitoring enables faster reaction time to address issues
- Optional BioConcrete[™], liners, and coatings to protect against corrosion

SINGLE SOURCE PUMP STATIONS

ACCESS HATCHES

Jensen Precast customized access hatches allow for fast and easy removal of pump station components for upgrades and maintenance. Our hatches are sized to ensure proper clearance of pumps and come fit with nut rails for seamless connection to the lift out guide rail system. All our hatches can be outfitted with safety and security features to meet your project requirements.

VALVE VAULTS

۲

Our valve vaults are available in round, rectangular, and square standard sizes. We partner with top manufacturers for valves and flow meters. Our packages come with all of the piping, valves, and appurtenances for lift station assembly.

Our pump wells are designed and manufactured to handle any water flow expectation. When your project demands different shapes, sizes, and conditions, request our pump wells for circular or rectangular structures, wet pit or dry pit applications, and custom solutions.

ADDITIONAL OPTIONS

- Junction box options
- Anticorrosive liners and coatings
- Accurate pressure transducers
- Durable pump hoists
- Standalone power generators
- Variable frequency drives
- Pump coatings and jackets
- Augers and macerators
- Odor control systems
- Flow measuring meters
- Air release/vacuum vaults

TOM Typical inflow rates displayed. Rates available from ±5-5000 gpm.

PUMPS

Submersible, nonclogging, and built to last, we use only the highest quality pumps for your projects. Whether you run a fast food restaurant or engineer stormwater solutions, our pumps keep everything running smoothly. Ask one of our engineers to walk you through our solution to your project needs.

CONTROL PANELS

We offer custom or standard control panels to meet your exact requirements. Each control panel comes with detailed wiring diagrams and installation and operating instructions.

DESIGN RESOURCES

Our complimentary design packages include:

- Complete design and system integration services
- Flow and head calculations

(�)

- Pump selection analysis and system curve
- Site specific operating and lifecycle cost comparisons
- Project specific drawings

GRINDER VAULTS

Ideal for offices, schools, hospitals, apartments, condominiums, and other small communities, our package grinder vaults solve applications for solid waste. We offer standalone units or integrated with pump equipment. Headworks applications with augers and screening systems are also available. (\bullet)

Jensen Precast designs, engineers, and manufactures precast concrete products for the growing infrastructure needs of communities, businesses, and government agencies.

۲

Jensen Water Resources delivers complete systems for the most demanding stormwater, pump station, and onsite wastewater projects. We collaborate with engineers and contractors to enable the best design, bid, and build outcomes for your unique project needs.
