

Harvest Pillar For HOP YARDS

Grow your hop plants on one of the tallest, most durable trellis systems. Harvest Pillar takes your hops business to new heights.

Trellis Up To 24' Tall

Hop plants can grow 12" a day under ideal conditions. Make sure your trellising system can keep up. Get Harvest Pillar from sizes 6' to 24' tall. Gain consistent strength and durability at any height.

Resist Mildew Wood Rot

Save on replacement costs every year. Harvest Pillar concrete trellis posts will resist common hop yard diseases and pests for decades. Unlike wood posts, concrete does not rot, decay, or break down.

Keep Soil Toxin-Free

Treated wood and steel trellis posts can emit chemicals and toxins into your soil, especially during weather events. Concrete is environmentally friendly and remains unaffected by weather.

Made in California by Jensen Precast

Durable Posts. Sized for Growth.

Our posts come in sizes ranging from 6' to 24' high and 3" to 5" in width. We offer a variety of Harvest Pillar products for all your trellising needs, including brackets, anchors, and wire.

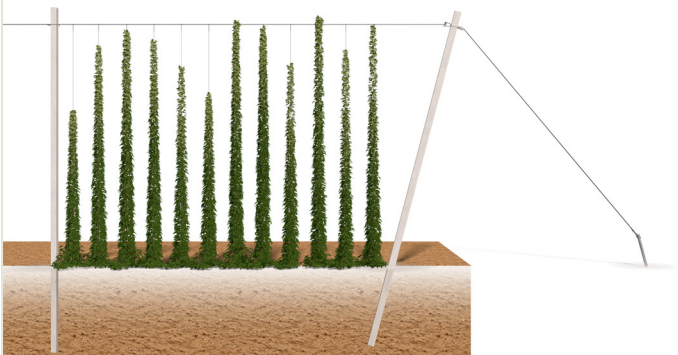

Typical Hop Yard Example

LINE POST

Typical profile 3" x 3" x 20'

Harvest Pillar posts are currently being utilized with 22' spacing in most applications, saving money with less posts per acre.

END POST

Typical profile 4" x 4" x 22'

Harvest Pillar end posts are designed to withstand heavy compression loading typical in hop installations without issues.
